

Nclose
security within

Nclose is a cyber security specialist organisation established in 2007. We develop, supply and implement cyber security solutions aimed at safe guarding our clients against attacks and detecting malicious activity proactively.

Through our innovate approach to delivery, partnerships with the world's leaders in cyber security and commitment to building and maintaining relationships with our clients, we are able to deliver effective cyber security solutions.

MANAGE SERVICES

Many organisations are not able to justify the expense of dedicated IT security engineers, often resulting in unnecessary IT burdens being placed on unqualified staff members. Ultimately this approach exposes your company to vulnerabilities at several levels - including IT security.

Nclose provides professional advice and management of network firewalls, content filters, and other security solutions. Nclose offers once-off advisory consultation, the initial configuration of a new or existing security solution, or regular maintenance and reporting to ensure that your IT security environment is operating at maximum efficiency.

SECURITY ASSESSMENT & TESTING

Nclose provides you with reassurance and facilitates regulatory compliance by delivering a comprehensive list of vulnerability assessment and penetration testing services. Regular assessment of your system's vulnerabilities and testing of its security controls will reveal how vulnerable your infrastructure is from an attacker's perspective.

Depending on your organisation's requirements, these services can be customised for specific scenarios, such as API and web applications, hosted infrastructure, internal LANs, and any other specific environment in which uptime is critical or where a compromise could place sensitive data at risk.

ADVISORY SERVICES

Ntrust offers tailor-made engagement models to deliver our bespoke portfolio of governance, risk, compliance and security services which are designed to maximise value to your business.

OT CYBERSECURITY CONSULTING

Many Operational Technology (OT) companies face growing challenges in securing their ICS/SCADA networks. At Nclose, we are able to provide OT cybersecurity consultancy services to assist organisations in understanding where the risks come from and to help mitigate these risks. Working with ICS/SCADA systems every day, we have valuable experience and knowledge of the threats to ICS/SCADA systems.

Our consulting services include:

- OT Cybersecurity policy creation.
- OT Security Awareness training.
- OT Cybersecurity planning in line with industry frameworks like NIST SP 800-82 and ISA 62443.

MANAGED DETECTION AND RESPONSE SERVICE

Nview is Nclose's Managed Detection and Response service (MDR). Nview provides advanced threat detection with a key element missing in most traditional SOC (Security Operations Centre) offerings... the human element. Most SOC's rely on vendor supplied use cases or traditional technologies like Antivirus or Web Filtering to detect threats. These traditional inputs often generate false positives or require significant tuning, which is rarely done.

Nview is different, we incorporate next generation concepts to detect threats which are missed by traditional security technologies.

These include:

- Analyst driven threat hunting – security professionals actively analysing logs to identify anomalies.
- Comprehensive log monitoring – we monitor beyond the traditional security software sources, such as DNS traffic, application processes and other sources which are often overlooked.
- Include honeypots in our offering as standard – honeypots can quickly alert us when intruders or malware is attempting to move vertically in your network.
- Incorporates tailored threat intelligence which is constantly tuned.
- Actively mitigate against “alert fatigue” and “defence regression”.
- Regular assessment of your external foot print to detect any changes

Nview has a simple pricing model without requiring complex calculations. Our service improves with the amount of data we analyse, and our pricing model reflects this.
